### Safety Management System Implementation Plan

#### Introduction

The purpose of this document is to assess the safety management system (SMS) of Engineered Geothermal Systems (EGS) Energy Limited, against the requirements of the BS OHSAS 18000 series of standards, the Borehole Sites and Operations Regulations (BSOR) 1995 and the Offshore Installations and Wells (Design and Construction etc) Regulations (DCR) 1996. The document will identify weaknesses or omissions and develop a plan to achieve full implementation of the SMS and compliance with statutory legislation.

The SMS is intended to effectively manage the Occupational Health and Safety (OH&S) of employees and other interested parties.

The BS OHSAS 18000 series is:

- BS OHSAS 18001:2007 Occupational health and safety management systems requirements;
- BS OHSAS 18002:2008 Guidelines for the implementation of BS OHSAS 18001:2007; and
- BS OHSAS 18004:2008 Guide to achieving occupational health & safety performance.

This document will set out the recommended actions for implementing BS OHSAS 18001:2007 which are laid down in BS OHSAS 18002:2008, and the recommended actions required in order to demonstrate compliance with BSOR and DCR. The document will assess how these actions have been, or are to be, met within EGS Energy Limited and will conclude by suggesting action needed to ensure that the system is implemented efficiently and on time.

#### SMS Requirements from BS OHSAS 18001

Table 1 (page 5) shows the OHSAS 18001 requirements as headings in bold with the OHSAS 18002 guidelines to achieve each requirement detailed below. The EGS Energy Limited actions taken or planned are shown against each guideline with an estimation of the progress as of the 13th March 2013. This forms an effective gap analysis which will identify areas for remediation.

#### Identified Gaps in BS OHSAS 18001 Requirements

Table 2 (page 23) shows the items identified for further action.

# SMS Requirements from the Borehole Sites & Operations Regulations (BSOR) 1995

Table 3 (page 34) shows the BSOR requirements as headings in bold with the Regulations and Guidance to achieve each requirement of the legislation. The EGS Energy Limited actions taken or planned shall be inserted against each Regulation and Guidance as and when received, in order to demonstrate compliance.

# SMS Requirements from the Offshore Installations and Wells (Design and Construction etc) Regulations (DCR) 1996

Table 4 (page 47) shows the DCR requirements as headings in bold with the Regulations and Guidance to achieve each requirement of the legislation. The EGS Energy Limited actions taken or planned shall be inserted against each Regulation and Guidance as and when received, in order to demonstrate compliance.

#### **Forward Plans**

The forward plans below, shows a list of remedial actions needed to bridge the gaps found, and achieve the requirements of OHSAS 18001, BSOR and DCR.

#### Forward Plan - OHSAS 18001

- 1) Insert the health and safety policy statement from the Subcontractors Manual into the IMS Manual.
- 2) Reference health & safety model; OHSAS 18001: 2008, and health and safety, in conjunction with quality and environment throughout your documentation, for example, health, safety, environment and quality (HSEQ).
- 3) Check that all applicable OH&S legislation, codes of practice and guidance documents have been included in the current IMS Doc. No. 5 Register of Regulations.
- 4) Draft an additional Management procedure (MP) for the Identification of Health & Safety Risks.
- 5) Draft an additional MP for Incident Reporting and Investigation.
- 6) Draft a quantitative risk assessment form that allows the user to identify the hazards, the hazard effect, control measures to eliminate or reduce the risks and preliminary and residual risk ratings based on a 5 x 5 matrix.
- 7) Draft a 5 x 5 risk matrix based on likelihood x severity and formulate a risk rating table based on acceptable and unacceptable levels of risk.
- 8) Draft a COSHH risk assessment form.
- 9) Draft a COSHH register.

ENGINEERED GEOTHERMAL SYSTEMS

- 10) Draft a Provision & Use of Work Equipment Regulations (PUWER) risk assessment form.
- 11) Draft a Management of Change procedure.
- 12) Draft and maintain an Incident Register.
- 13) Draft a permit to Work procedure.
- 14) Refine existing Contractor selection/control management procedure (MP).

#### Forward Plan – Borehole Sites and Operations Regulations 1995

- 1) Notify the HSE of the project.
- 2) Exercise overall control of the site and recognise statutory duties as the owner/operator. Roles and responsibilities will be defined within the EGS SMS, which will form the basis to meet the requirements of BSOR.
- 3) Ensure co-operation between employers and self-employed persons throughout the project. Develop site rules and inductions for EGS operations to be distributed to all personnel and identify specialist training requirements for particular roles.
- 4) Ensure all relevant information, for example, risk assessments, technical drawings and files etc are provided.
- 5) Compile the health and safety document. This will be developed closer to the commencement of operations and will be based on the Operators SMS, and a Bridging Document with the Main Contractor (drilling contractor) including Emergency Response procedures.
- 6) Assess the requirement of additional duties of the operator. To meet the requirements of Regulation 8, a construction MP will be drafted which will require the compilation of an "As Built Document" on completion of construction, thereby confirming the site specifications and suitability. Draft a wellsite handover certificate for construction.
- 7) Assess the need for additional health and safety requirements. Draft Pre-Task Risk Assessment MP and documents to ensure that any additional operations not covered in the pre operation RA are assessed. Identify requirements for signage, zoning, traffic etc. Review requirements for specialist services i.e. EX Zoning, NORMS etc.
- 8) Consider health surveillance. This will be addressed within the EGS SMS, but an operational Risk Assessment will be completed and reviewed prior to operations.
- 9) Provide HSE with 21 day notification prior to commencement of drilling operations, with the submission of the drilling program. Schedule 1 specifies what must be covered in this submission.

Forward Plan – Offshore Installation and Wells (Design and Construction etc) Regulations 1996

ENGINEERED GEOTHERMAL SYSTEMS

- Ensure that the general duties of the operator for the safe condition of the well at all stages of its life are recognised and implemented. This will take the form of a Well Operations Standards document (essentially policies and procedures).
- Conduct an assessment of the conditions below ground at the pre-design stage and post-design stage. This will be completed through an EGS led geological assessment and drilling review (first stage risk assessment).
- Ensure that the well is designed to enable suspension or abandonment as and when required (UK Oil and Gas guidelines to be followed). This will be within the Moorhouse design review.
- 4) Ensure that every part of the well is composed of materials that are suitable for purpose.This will be within the Moorhouse design review.
- 5) Ensure that suitable well control equipment is provided for use. This will be within the Moorhouse design review.
- 6) Draft a written scheme for independent well examination. UK Oil and Gas guidelines to be followed.
- Report the operational state of the well to the HSE on a regular basis. Draft a weekly HSE report template.

#### Table 1

| No. | OHSAS 18002 guidelines require:               | Effected in EGS Energy Limited by:  | %    |
|-----|---|---|------|
| 1   | Define and document the scope of t            | the SMS   |      |
| 1.1 | Initial review to determine current position. |   | 100% |
| 1.2 | Setting the scope of the SMS.                 | Integrated Management System (IMS)<br>Manual – Section 4.0 Scope & Field of<br>Application and Section 6.0 Introduction<br>to the Integrated Management System. | 80%  |
|     |   |   |      |
| 2   | Top management define and author              | rise policy within SMS scope  |      |
| 2.1 | Record high level risk assessment to          | (Currently Environment & Quality<br>only)   | 0%   |

### Identified Gaps in BS OHSAS 18001 Requirements

Table 2 shows the items identified for further action

#### Table 2

| 1   | Define and document the scope of the SMS |  |  |
|-----|--|--|--|
| 1.2 | Setting the scope of the SMS.            | Include Health & Safety model; OHSAS 18001:<br>2008 in Section 4.0 and Section 6.0 of the IMS<br>Manual. |  |

| 2   | Top management define and author   | ise policy within SMS scope   |  |
|-----|--|---|--|
| 2.1 | Record high level risk assessment to define depth/detail required.   | Draft an additional Management Procedure<br>(MP) for the Identification of Health & Safety<br>risks.    |  |
| 2.3 | <ul> <li>Develop a policy statement (also satisfying HASWA 1974) which commits, as a minimum, to: <ul> <li>Prevention of ill health and injury;</li> <li>Continual improvement in OH&amp;S management;</li> <li>Continual improvement in OH&amp;S performance;</li> <li>Compliance with applicable legal requirements; and</li> <li>Compliance with other requirements to which the company subscribes.</li> </ul> </li> </ul> | Merge the Health & Safety Policy from the<br>Subcontractors Manual into Section 1 of the<br>IMS Manual. |  |
| 2.4 | Develop a full OH&S policy document (see Page 12, OHSAS 18002).  | As above.   |  |

| 3   | <b>–</b>   | plement and maintain a procedure(s)<br>isk assessment and determination of  |
|-----|--|---|
| 3.1 | Develop a methodology for hazard identification (HAZID) and suitable and sufficient risk assessment (RA).  | Draft an additional Management Procedure<br>(MP) for the Identification of Health & Safety<br>risks.  |
|     |  | In order to ensure the RA is suitable and sufficient, develop a quantitative risk assessment form which identifies the preliminary and residual risk ratings based on a 5 x 5 matrix. |
| 3.2 | Identify all hazards.  | Include the hazard identification process in the MP for the Identification of Health & Safety risks.  |
| 3.3 | Assess the risk from those hazards, taking into account the adequacy of existing controls.   | 5 x 5 risk matrix required to ensure that risks are reduced to an acceptable level.   |
| 3.4 | Apply risk controls to reduce risk<br>ALARP using an appropriate<br>hierarchy.   | Hierarchy of risk control measures is required<br>in the MP for the Identification of Health &<br>Safety risks.   |
| 3.5 | Implement controls.  | Include details of control measures in the MP for the Identification of Health & Safety risks.  |
| 3.6 | Manage change as a result of implemented controls, including information instruction and training.   | Draft a Management of Change Procedure.   |
| 3.8 | <ul> <li>Review the RA documents on:</li> <li>Periodic risk based frequency;</li> <li>Technology change;</li> <li>Legislation change;</li> <li>Work method change;</li> <li>Substance change;</li> <li>Introduction of vulnerable person; and</li> <li>After an incident.</li> </ul> | Include details required in the MP for the Identification of Health & Safety risks.   |

| 4   | Establish, implement and maintair assessing legal and other OH&S red  | n a procedure(s) for identifying and quirements that are applicable to it   |  |
|-----|---|---|--|
| 4.1 | Establish a statute, legislation and<br>codes of practice register with a<br>procedure for use and nominated<br>persons authorised to receive the<br>information. | Check that all applicable OH&S legislation,<br>codes of practice and guidance documents<br>have been included in the current IMS Doc.<br>No. 5 - Register of Regulations. |  |

5 Establish, implement and maintain documented OH&S objectives, at relevant functions and levels within the organisation Include OH&S objectives and targets in the 5.1 Using legal requirements, prioritised following sections: list of risk assessments, employee feedback, management review, IMS Manual - Section 9.2, 9.4 and 27.0. incident records etc. set objectives which are: IMS Doc. No. 4 Specific: Measurable; MP 13 - Objectives & Targets. Achievable: Realistic; and Time limited. 5.2 Include OH&S objectives and targets in the Establish a programme for achieving following sections; those objectives including: · Designation of responsibility IMS Manual – Sections 9.2, 9.4 and 27.0. and authority; The means by which the IMS Doc. No. 4 objective is to be achieved; The time-frame in which the MP 13 - Objectives & Targets. objective is to be achieved; and Success criteria for establishing when the objective is met.

|----|-------|-----------------|----------|----------------|----------------|------|----------|---|--|
|    | proce | edure(s):       |          |                |                |      |          |   |  |
|    | a)    | to identify the | e potent | tial for emerg | gency situatio | ons; |          |   |  |

b) to respond to such emergency situations.

The organisation shall respond to actual emergency situations and prevent or mitigate associated adverse OH&S consequences. In planning its emergency response the organisation shall take account of the needs of relevant interested parties, e.g. emergency services and neighbours.

| 15.4 | Emergency planning should also be<br>reviewed as a part of the ongoing<br>management of change. Changes in<br>operations can introduce new<br>potential emergencies or necessitate<br>that changes be made to emergency<br>response procedures. | Draft a Management Of Change Procedure. |  |
|------|---|---|--|

| 16   | The organisation shall establish, implement and maintain a procedure(s) to monitor and measure OH&S performance on a regular basis.  |  |  |  |  |  |
|------|--|--|--|--|--|--|
| 16.1 | An organisation should plan what will<br>be measured, where and when it<br>should be measured, what<br>measurement methods should be<br>used, and the competence<br>requirements for the persons who<br>will perform the measurements          | Include OH&S in the following;<br>IMS Manual – Section 21.0, Monitoring and<br>Measurement of Processes.<br>MP 12 – Internal Management System Audits. |  |  |  |  |
| 16.2 | The results of measurement and<br>monitoring should be analysed and<br>used to identify both successes and<br>areas requiring correction or<br>improvement.  | Include OH&S in the following;<br>IMS Manual – Section 21.0, Monitoring and<br>Measurement of Processes.<br>MP 12 – Internal Management System Audits. |  |  |  |  |
| 16.3 | The organisation's measuring and<br>monitoring should use both reactive<br>and proactive measures of<br>performance, but should primarily<br>focus on proactive measures in<br>order to drive performance<br>improvement and injury reduction. | Include OH&S in the following;<br>IMS Manual – Section 29.0, Corrective and<br>Preventative Action.<br>MP 14 – Corrective and Preventative Action.     |  |  |  |  |

#### 17 Consistent with its commitment to compliance the organisation shall establish, implement and maintain a procedure(s) for periodically evaluating compliance with applicable legal requirements.

| 17.1 | Establish a register of legislative and | Check that all applicable OH&S legislation,   |
|------|---|---|
|      | internal requirements.                  | codes of practice and guidance documents have been included in the current IMS Doc. |
|      |   | No. 5 - Register of Regulations.  |

| 18   | The organisation shall establish, im to record, investigate and analyse in   | plement and maintain a procedure(s)<br>ncidents.  |
|------|--|---|
| 18.1 | Establish and maintain procedure(s)<br>for reporting, investigating and<br>analysing incidents. The purpose is to<br>provide a structured, proportionate and<br>timely approach for determining and<br>dealing with the underlying (root)<br>cause(s) of the incident or for<br>determining legal issues.  | Draft an Incident Reporting and Investigation<br>Policy and Procedures document.  |
| 18.2 | Define what an incident is and what<br>sub classifications exist (e.g. LTI,<br>RWC, Major, Environmental etc.)   | Define in the Incident Reporting and Investigation Policy and Procedures document.  |
| 18.3 | Ensure all incidents are investigated.   | Define the investigation process.   |
| 18.4 | A competent person is to define the<br>purpose of the investigation (i.e.<br>whether the purpose is OH&S based<br>or whether it is to define legal issues<br>relating to the incident). Note: This<br>rider is to allow legal privilege to be<br>claimed to protect business continuity.   | Define in the Incident Reporting and<br>Investigation Policy and Procedures document.   |
| 18.5 | Ensure that corrective actions are<br>subject to change management and<br>are closed out and reviewed by a<br>competent person.  | Ensure that corrective actions follow the<br>Management of Change Procedure which has<br>previously been identified as a necessity.<br>Include OH&S in the Corrective and<br>Preventative Action documentation. |
| 18.6 | Maintain an incident register (note that the terms of the data protection act are relevant).   | Draft and maintain an incident register.  |
| 18.7 | Ensure investigators possess the relevant competencies.  | Ensure investigations are suitable and<br>sufficient and undertaken by a competent<br>person(s).  |
| 18.8 | <ul> <li>The outcomes of investigation must: <ul> <li>a) Determine underlying OH&amp;S</li> <li>deficiencies and other factors</li> <li>that might be causing or</li> <li>contributing to the</li> <li>occurrence of incidents;</li> </ul> </li> <li>b) identify the need for</li> <li>corrective action;</li> <li>c) identify opportunities for</li> <li>preventive action;</li> <li>d) identify opportunities for</li> <li>continual improvement; and</li> <li>e) communicate the results of such investigations.</li> </ul> | Define in the Incident Reporting and<br>Investigation Policy and Procedures document  |

|      | ENGINEERED GEOTHERMAL SYSTEMS  |   |  |  |  |  |  |  |  |
|------|--|---|--|--|--|--|--|--|--|
| 20   | The organisation shall establish and maintain records as necessary to demonstrate conformity to the requirements of its OH&S management system and of BS OHSAS 18001: 2007, and the results achieved.  |   |  |  |  |  |  |  |  |
| 20.1 | Records should be maintained to<br>demonstrate that the organisation is<br>operating its OH&S management<br>system effectively and is managing<br>its OH&S risks.  | Include OH&S in the following;<br>IMS Manual – Section 7.0 Document and Data<br>Control.<br>MP 1 – Document and Data Control. |  |  |  |  |  |  |  |
| 20.2 | The integrity of records and data<br>should be maintained to facilitate<br>their subsequent use, e.g. for<br>monitoring and review activities, for<br>the identification of trends for<br>preventive action, etc.  | Include OH&S in the following;<br>IMS Manual – Section 7.0 Document and Data<br>Control.<br>MP 1 – Document and Data Control. |  |  |  |  |  |  |  |
| 20.3 | In determining the appropriate<br>controls for records the organisation<br>should take into account any<br>applicable legal requirements,<br>confidentiality issues (particularly<br>those relating to personnel), storage<br>/ access / disposal / back-up<br>requirements, and the use of<br>electronic records. | Include OH&S in the following;<br>IMS Manual – Section 7.0 Document and Data<br>Control.<br>MP 1 – Document and Data Control. |  |  |  |  |  |  |  |
| 20.4 | For electronic records the use of<br>antivirus systems and off-site backup<br>storage should be considered.  | Include OH&S in the following;<br>IMS Manual – Section 7.0 Document and Data<br>Control.<br>MP 1 – Document and Data Control. |  |  |  |  |  |  |  |

| 21   | <ul> <li>management system are conducted</li> <li>a) determine whether the OH&amp;S manual</li> <li>1. conforms to planned arrange</li> <li>2. including the requirements of</li> <li>3. has been properly implement</li> </ul>            | nagement system:<br>ements for OH&S management<br>of this OHSAS Standard; and<br>ted and is maintained; and<br>ganisation's policy and objectives; |  |
|------|--|--|--|
| 21.1 | Planned SMS audits should be<br>carried out by personnel from within<br>the organisation and/or by external<br>personnel selected by the<br>organisation, to establish whether<br>the SMS has been properly<br>implemented and maintained. | Include OH&S in the following;<br>IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report.                    |  |

| C    | <b>ENERG</b><br>ENERG  |   |
|------|--|---|
| 21.2 | Individuals selected to conduct the<br>OH&S management system audits<br>should be competent and be<br>selected in a manner to ensure<br>objectivity and impartially in the audit<br>process. | Include OH&S in the following;<br>IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report. |
| 21.3 | Use risk assessments to define<br>frequency and scope of audits by<br>establishing potential consequences<br>of failure of a particular SMS<br>element.                                      | Include OH&S in the following;<br>IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report. |
| 21.4 | The organisation must develop a procedure(s) for its internal audits.  | Include OH&S in the following;<br>IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report. |
| 21.5 | The organisation must appoint external auditors.   | Include OH&S in the following;<br>IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report. |
| 21.6 | Roles and responsibilities must<br>require employees to cooperate with<br>audits and training must make the<br>purpose of audits clear.  | Include OH&S in the following;<br>IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report. |
| 21.7 | An annual audit schedule should be<br>established and all audit plans<br>communicated in good time.  | Include OH&S in the following;<br>IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report. |
| 21.8 | The audit should ensure that a representative sample of the important activities is audited and that relevant personnel are interviewed. This can include interviews of personnel such as    | Include OH&S in the following;<br>IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report. |

| 21.0  | individual workers, employee<br>representatives and relevant<br>external personnel, e.g. contractors.  | Include OH&S in the following;  |
|-------|--|---|
| 21.9  | A review of the results should be<br>carried out and effective corrective<br>action taken, where necessary.  | IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report.                                   |
| 21.10 | Follow-up monitoring of audit<br>findings should be established to<br>ensure that identified<br>nonconformities are addressed.   | Include OH&S in the following;<br>IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report. |
| 21.11 | Top management should consider<br>OH&S management system audit<br>findings and recommendations, and<br>take appropriate action as necessary<br>within an appropriate time. | Include OH&S in the following;<br>IMS Manual – Section 26.0 Internal IMS<br>Audits.<br>Audit Schedule Planner.<br>Audit Report. |

|             | two distinct strands. First, the                                    |           |    |     |        |   |
|             | design and construction of the                                      |           |    |     |        |   |
|             | well should take into account the                                   |           |    |     |        |   |
|             | health and safety of the people                                     |           |    |     |        |   |
|             | involved in the process of  |           |    |     |        |   |
|             | suspending or abandoning it.  |           |    |     |        |   |
|             | Second, the design and construction of the well should              |           |    |     |        |   |
|             | take into account of its continuing                                 |           |    |     |        |   |
|             | integrity after suspension and/or                                   |           |    |     |        |   |
|             | abandonment, so there are no  |           |    |     |        |   |
|             | unplanned escapes of fluids from                                    |           |    |     |        |   |
|             | it or its reservoir.  |           |    |     |        |   |
|             | 29 - It is recognised that many                                     |           |    |     |        |   |
|             | elements of suspension and  |           |    |     |        |   |
|             | abandonment can only be   |           |    |     |        |   |
|             | decided at the time of suspension<br>or abandonment, when actual    |           |    |     |        |   |
|             | conditions in the well can be fully                                 |           |    |     |        |   |
|             | assessed. However, elements   |           |    |     |        |   |
|             | which can be considered at the                                      |           |    |     |        |   |
|             | time of well design and during                                      |           |    |     |        |   |
|             | drilling will have an important                                     |           |    |     |        |   |
|             | bearing on the effectiveness of                                     |           |    |     |        |   |
|             | the subsequent suspension or  |           |    |     |        |   |
|             | abandonment.  |           |    |     |        |   |
| 16          | Materials   |           |    |     |        |   |
| Regulation  | The well operator shall ensure                                      |           |    |     |        |   |
| 16          | that every part of a well is  |           |    |     |        |   |
|             | composed of material which is                                       |           |    |     |        |   |
|             | suitable for achieving the  |           |    |     |        |   |
|             | purposes described in Regulation                                    |           |    |     |        |   |
| Quideres    | 13(1).  |           |    |     |        |   |
| Guidance    | 30 – This Regulation requires the                                   |           |    |     |        |   |
|             | well operator to ensure that all materials used in the construction |           |    |     |        |   |
|             | and any subsequent  |           |    |     |        |   |
|             | modifications to the well are                                       |           |    |     |        |   |
|             | suitable for purpose, to ensure                                     |           |    |     |        |   |
|             | the safety of the well and so                                       |           |    |     |        |   |
|             | reduce to as low as is reasonably                                   |           |    |     |        |   |
|             | practicable any risk to the health                                  |           |    |     |        |   |
|             | and safety of people. This  |           |    |     |        |   |
|             | requirement will apply not only                                     |           |    |     |        |   |
|             | such items as cement, casing or other well tubulars, but also the   |           |    |     |        |   |
|             |   |           |    |     |        |   |
